

Help Doc for Flash Den file:

Wave_Animation_Flash8_CS3.fla

Creator: ClearlyTrained / Eric Bort

For additional help feel free to comment on the Flash Den message board under this item – or use our contact information found at www.clearlytrained.com/contact/ and we'll get right back to you.

This file will work with:

We have provided a Flash Flash 8 version of this file (it will open in Flash CS3 and CS4 as well)

Instructions:

This file is a full vector shape tween looping animation of two wave sets.

No actionscript is needed (just plop on your timeline and they'll handle the rest), but here are a few tips to get your waves looking their very best! (tips below are shown in the source .FLA file)

- Layer them together while scaling to add perspective
- Add some tint (click a wave, then in your properties panel click the 'color' drop down, select 'tint' - choose a color then adjust the amount)
- If using flash 8 player or above add a blur for more perspective effects (under the 'filter' tab)
- Squash and stretch to make wave tips taller or wider for a variety of looks

We've also included some vector clouds to use as you please.
